## OTHER DETAILS OF BUSINESS.

During the year a total of 80,400 applications for patents, reissue of patents, and designs and 141,920 amendments in pending applications were filed. This represents an increase of 20,785 in the number of applications and a decrease of 9,983 in the number of amendments. There were filed without fees, under the act of March 3, 1883, 226 applications for patent, and under Rule 170 of the Rules of Practice 12 applications for reissue, making a total of 238 applications without fees.

The fees received by mail and express amounted to \$1,477,073.13, and the fees paid by hand to the Financial Clerk amounted to \$878,791.13. The number of letters indexed and filed, constituting the general correspondence of the Office, was 288,335. In addition to this 26,825 letters of inquiry were returned with circulars of information answering the questions propounded. The number of parcels received by registered mail was 15,254, and the number of parcels by express was 2,278.

During the year 7,267 applications were forfeited by reason of failure to pay the final fee within the time prescribed by section 4885, Revised Statutes. Since March 3, 1861, about 248,665 forfeited cases have become abandoned.

In the Drafting Division 976 drawings were made for inventors, who paid \$3,679.00 therefor, and 5,163 drawings previously filed were corrected upon request by the inventors, for which the Office received \$5,052.30. The total fees received for work by the Drafting Division were \$8,731.30.

In addition to this 6,813 corrections in drawings were made without cost to the inventors.

In the Assignment Division 27,250 deeds, transferring the titles to patents, etc., and containing 12,991,800 words, averaging 477 words per deed, were recorded. For this work the Office received \$56,043.36. In addition to this the Assignment Division prepared 2,392 abstracts of title and 4,160 briefs, for which fees amounting to \$3,127.85 were paid. The total earnings of the Assignment Division were \$59,171.21.

Typewritten copies of records aggregating 11,425,400 words and photostat copies aggregating 15,795,200 words were furnished, and other copies containing 6,918,100 words, made by outsiders, were compared and certified by the Office. For the whole of this work the Office received \$34,138.70. For the certificates attached to certain of these copies the Office received \$1,708.75, a total of \$35,847.45. The Office supplied 2,616 certified printed copies of patents, 5,755 trade-marks, 51 copies of prints and labels, 5 copies of designs, etc., and received therefor \$6,870.00.

Inventors and attorneys were furnished with 60,791 photographic copies of drawings, 8 by 12½, at fifteen cents each, and 5,285 photographic copies of drawings, 10 by 15, at twenty-five cents each; also, 67,405 photostat copies at fifteen cents each and 54,204 photostat copies at twenty-five cents each. The amounts received for these photographic and photostat copies were \$10,439.90 and \$23,661.75, respectively. The expenditures during the year for supplies for the photostat-machine were \$8,352.18.

Printed copies of specifications and drawings of patents to the number of 2,495,305 were sold at five and ten cents each, (the price having been increased to ten cents by act of Congress effective November 4, 1919,) bringing to this Office on this account \$138,629.50. For 633,342 copies sold to libraries the Office received \$800.00. The total received from the sale of copies of patents was \$139,429.50, an increase of \$40,765.35 over the receipts for last year. Copies to the number of 960,097 were shipped to foreign Governments, and 123,327 copies were drawn for Office use. The total number of printed copies of patents distributed during the year was 4,443,965.

## CLASSIFICATION OF PATENTS.

The complete reclassification of the entire million and a third patents granted in this country, which revision was rendered necessary because the older classification had become obsolete and outgrown by the advances in the arts, has proceeded much more rapidly the past year than heretofore by reason of the change in the methods of procedure. Formerly the work was all done in one division by a corps of Assistant Examiners, under the supervision of the Examiner of Classification. Under the present plan each class is reclassified by the Assistant Examiner who has examined it for years and is presumably familiar with all its patents. All the work is still under the supervision of the Examiner of Classification. The revision of something over one hun-

dred and thirty-five thousand patents was completed during the year 1919. The work has, however, been greatly delayed by lack of clerks to perform the necessary clerical work. The task has proved a very great and extremely technical one, and, largely because similar machines and processes are often used in half a dozen different arts and for as many different purposes, most elaborate and exhaustive investigations are necessary in order to bring patents for like things together or place them where they may be readily found. If the rate of revision of last year can be maintained, all the classes will have been revised within three or four years.

#### SCIENTIFIC LIBRARY.

In the Scientific Library the most noteworthy event of the year 1919 was the completion of the binding, in classified order, of the patents of all foreign countries, except Great Britain, from which we have received third copies.

These patents, the accumulation of years, are representative of Austria, Denmark, France, Norway, Sweden, and Switzerland and were all arranged according to the classification order of their respective countries and are now bound and are on the shelves.

The third copies, being currently received from these countries, are arranged in classified order and are kept in boxes available to searchers. As these accumulations become sufficiently large to form volumes they should be bound, as are the first or original copies, and it is obvious that this means an addition to the annual cost of library binding, for which provision should be made in future estimates.

The Netherlands patents are also available, arranged in classes, and will be bound as they accumulate.

Unfortunately the library did not possess a complete third set of German patents, the earlier numbers up to 66,500 never having been received. All the later issues, however, on hand have been bound in classified order and have proved to be of an inestimable value to searchers. An attempt will be made on the conclusion of peace to secure the patents necessary to complete this set.

The library also possesses a third set of British patents, which hitherto have been stored away in their original packages, as received. It is possible that at some future time this Office may decide to arrange and bind this set in classified order; but as very satisfactory searches can now be made in the classified British Abridgements of Patents, which are in this library, there is no urgent need of this work at present. Consideration is being given to the recommendation that this set be at least arranged in numerical order in file-cases, so that they may be used instead of the bound volumes for making photostatic copies, as single copies are much better adapted to this use and would save the wear and tear of the bound volumes, rebinding of which costs a considerable sum.

Some progress has already been made in arranging this set in numerical order, and it is hoped the library will be provided with sufficient employees to continue and complete this work. Should the

Office decide later to arrange them in classified order, the work would not be lost as preliminary to arranging them in classified order.

Through arrangements with the Australian patent office the exchange of their patent specifications for those of the United States has been resumed, and all the back numbers of Australian patents from the time the exchange was suspended in 1910 have been received by the library. In carrying on the general work of the library we have been greatly handicapped by lack of sufficient help.

The work of consolidating into one card-catalogue the several separate catalogues in this library is rapidly progressing; but there is yet considerable work to be done in the entry of our books in this consolidated catalogue, and in view of its importance in readily locating a book an endeavor will be made to provide, if possible, sufficient employees to continue and complete the work at an early date.

During the year the translation of the index to the German classification, which was made by the official translator in 1918, was printed and has proved of great service in searching. A typewritten translation, by the same translator, of the French patent office classification is now used in the reading-room of the library. There is under consideration the question of printing this translation, as being then in a more permanent form.

#### PRINTED COPIES OF PATENTS.

The system of storing and delivering copies of patents has developed haphazardly, in accordance with no preconceived general plan and under conditions which could neither be controlled nor foreseen. There are about forty million copies stored from cellar to garret in no regular sequence, in every conceivable location, and under every variety of state. It is a problem that has given concern to the officials for many years; but it did not become pronounced until early in the year 1919, when a rush of increased orders precipitated a condition which exposed the serious inadequacy of that service. The public could not receive adequate responses to its legitimate demands, many interests suffered, and the Office was at a loss to know how to apply an immediate remedy. Recourse was had to a request for additional help, which Congress gave in an act which became available in November. Meanwhile it was decided to make a survey of the entire situation, and I issued instructions to proceed in that investigation and to make that problem a special concern. The Bureau of Efficiency, in response to my request for assistance, detailed experts to aid in this survey, and it is confidently expected as a result of the investigations pursued and from an analysis of the large amount of data gathered that improved conditions will be established and the public rendered that accommodation it is legitimately entitled to obtain.

While the state of the appropriation forbids the installing of adequate equipment, it was deemed advisable to expend out of the limited allotment of the Bureau a sum sufficient to install a steel-case

unit large enough for purposes of experimentation. It has been put in place, and a trial confirms the impression that something similar to it should be contrived in order to provide means to scientifically store the copies, prevent losses thereof, accurately locate them, and assure against danger of fire.

Other changes proposed and which are in process of being effected are the rearranging of the copies as near as may be in continuous chronological sequence, in restoring to proper position and making accessible copies out of place or in jumbled condition, marking out exclusive shelving territory and confining activities in each unit to but one copy-puller, and, lastly, introducing a system of rigid supervision and inspection.

#### REGISTRATION OF ATTORNEYS.

In conformity with the tendency in recent years, the standard for admission to practice before the Patent Office is being strictly maintained. The records of candidates for admission are closely scrutinized to prevent the registration of those not fully qualified to properly assist clients in the presentation and prosecution of their cases before this Office.

Where applications for patents are referred to as showing the requisite qualifications for admission, these are carefully examined for evidence of a possession and exercise of that knowledge of patent law and procedure requisite for proper protection of the applicant's rights. The evidence submitted of the candidate's technical and scientific knowledge is also carefully considered.

Similar investigation is being made in the cases where candidates base their requests for registration merely on a knowledge of general law.

The necessity of safeguarding inventors through a closer scrutiny of those who desire to represent them before the Patent Office is a pressing one. The capacity and probity of members of the Patent Office bar can hardly be fixed at too high a standard. The knowledge, both of technics and patent practice, necessary to properly assist applicants for patents in their endeavors to obtain proper protection is becoming greater every day, due to the constant growth of the arts, the greater complexity of the scientific questions involved, and the immense body of legal literature that has arisen. It may therefore become necessary in the future, as the arts and questions involved become more and more complex, to insist upon more extensive proofs of qualifications than have been required in the past.

#### ADVERTISEMENTS OF ATTORNEYS.

The practice, inaugurated in 1918 by an amendment to Rule 17, of requiring submission for approval of all proposed advertising-matter intended to solicit patent business by registered attorneys has been adhered to and vigorously carried out during the past year, with what I believe to be gratifying results. Registered attorneys have conformed to the rules almost universally, and a number of unregistered firms and individuals soliciting patents through registered attorneys have voluntarily become amenable to the rule.

Misleading advertisements and circulars are doubtless still published; but a healthy sentiment against them has been established among advertising registered attorneys, which I regard with the greatest satisfaction.

The ethics of the profession are being observed more generally, and it is hoped another year will show even better results along this line and a patent bar emerge in which membership may be an indication universally of assured capacity to render faithful and proper service, in conformity to existing standards maintained by the bulk of the profession.

#### EQUIPMENT.

The equipment of the Office is insufficient for its requirements and is much below average in quality. This particularly applies to the state of the filing-cases to store copies of patents for use of Examiners in searching. Typewriting-machines are also urgently needed, the number in use being insufficient for the present needs of the Office and the quality of many below the standard necessary to perform effective work.

#### PERSONNEL.

##### *Clerical force.*

There were 123 resignations in 1919 in this branch of the service out of a total of about 525 employees, a rate of movement which was reflected in serious measure in the character of the work done. In the lower grades the overturn was from 75 per cent. to 150 per cent. On November 4, 1919, the deficiency bill was signed and gave to the Patent Office a number of clerks about equal to the amount dropped the previous July, and also provided fifteen additional copy-pullers. A few weeks later a further request for supplemental appropriations to provide an increase in force was obliged to be submitted. An increase in the clerical force of about five per cent. was asked for to take care of a general increase of fifty per cent. in the business of the whole Office. At this writing the second deficiency bill, containing this item, has been passed by both houses of Congress and is in conference, and when effective will materially relieve the critical situation now existing in the means for doing business in the Office and expedite the work to current condition in certain departments where the situation has caused annoyance to the public concerned.

##### *Examining corps.*

In the examining corps the following resignations took place during the year 1919:

Law Examiners.....	1
Principal Examiners.....	4
Trade-Mark and Design Examiners.....	1
First Assistant Examiners.....	12
Second Assistant Examiners.....	25
Third Assistant Examiners.....	14
Fourth Assistant Examiners.....	24
Total.....	81

In order to keep the ranks full it was necessary for the Civil Service Commission to hold five examinations during the year for entrance to the corps and to make fifty-five temporary appointments for the balance of the vacancies not obtainable through the regular channels.

During the year thirty-one men who resigned to enter the military service were reinstated, many of whom again resigned from the Office to enter private practice. Leaving out of consideration those in former years who resigned to enter the military service, the number of resignations the past year from the corps was the largest in the history of the Office. This is due not only to the general resumption of activity in peaceful pursuits, but to a rapidly-growing tendency in the commercial world to provide patent departments as essential adjuncts to manufacturing and industrial plants. The results of the great war and an examination of the conditions preceding it show most conclusively that the welfare, if not the very life, of a highly-industrialized nation is directly dependent upon the progress of invention and to the extent it is stimulated by governmental action. It is responsive to this rule that the tendency above noted is due. The effect of this on the Patent Office is detrimental in two opposing directions. The demands for technical and legal men to take charge of these patent departments in manufacturing plants can be answered only from one readily-available source of supply—that is, the Patent Office, where men with special technical qualifications and legal education are trained for this work. This new and growing activity results, on the other hand, in additional business before the Office. The effect is at the same time to increase the business of the Patent Office and to reduce the capability of the force to handle even the normal demands upon it.

The greatest possible emphasis must be laid upon this situation, because it vitally affects large industrial interests, which are bound up in their development with the character of the title to important property rights, as determined by the proceedings in the Patent Office. The adjudications of the Office must depend in quality upon a force sufficient in numbers to handle the increased amount of business before it and adequately recompensed to attract and hold men sufficiently qualified for service through special education and training.

In the last six months the changes in this most important branch of the service reached a twenty-five to thirty per cent. annual overturn, which obviously reduced the capacity of the corps and impaired the quality of the work. If the safeguards of the patent system are to be preserved, this tendency, which has been becoming more and more intensified in recent years and which promises to be even more acute in the immediate future, must be provided for by remedial legislation adequate to go to the root of the trouble.

Before this report was completely written a bill (H. R. 11954) introduced by Mr. Nolan in the House of Representatives—"To Increase Force and Salaries in Patent Office"—and receiving unanimous approval of the Patent Committee was submitted to the Committee of the Whole House on the State of the Union. Under its provisions Primary Examiners receive \$3,900 per annum and Assistant Examiners are graded from \$1,500 to

\$3,300, chiefs of clerical divisions receive \$2,500, and the salaries of draftsmen and lower-grade clerks increased to conform to wage standards in other Government Bureaus. The filing fee of applications has been changed from fifteen dollars to twenty dollars, and this change and the increase of revenue due to increase of business have been estimated to provide sufficient funds to pay for the increased expenditures thus provided.

It is hoped the bill will be enacted, as it provides relief in the directions already indicated as necessary and will go far in restoring the patent system to its proper usefulness.

#### LEGISLATION TO IMPROVE THE PATENT OFFICE.

For the 1921 regular legislative appropriation bill estimates were submitted for an increased force of Examiners and clerks and included an item covering urgent requirements for equipment. At this writing this legislative appropriation bill was reported out of committee with substantially every request asked for included therein. From the attitude of the present Congress, as indicated in its actions toward legislation affecting the Patent Office in the second deficiency and 1921 legislative bills and the Nolan bill. (H. R. 11984,) there has arisen much confidence of a restoration of usefulness of this Bureau's functions. The intelligent consideration and almost anxious interest displayed by every member of Congress coming in contact with these matters must be noted, and the gratitude of every friend of the patent system is due for this favorable attention of and response to the needs of the Bureau.

I wish also in this connection to express my personal gratitude to the representatives of the scientific, manufacturing, and legal interests who have so unselfishly, laboriously, and skilfully acted in behalf of the Patent Office. Without the mass of information they collected, the intelligence with which it was digested and presented, and the forceful backing they gave the movement through their high standing and disinterestedness it is questioned whether the results could have been so favorable.

To make the record complete, however, note must be made of the active and disinterested service of many of the members of the examining corps. The Patent Office Society, composed mainly of such membership, is devoted to furthering the interests of the patent system, particularly in promoting improvements therein.

In furtherance of such purpose the society is publishing a monthly magazine, in which have appeared articles contributed gratuitously by members of the corps and attorneys practising before the Office. Many of them are the result of laborious research and of high technical excellence and disclose, as no other source has done, the fine spirit of devotion to the best precepts of professional conduct that animates the corps and the intense interest that prevails among them in the improvement and progress of the patent system. This society has formed a bond between the legal fraternity and the technical corps of the Office in the discussion of measures,

whether administrative, legal, or technical, designed to elucidate principles or propose reforms, and it is confident that as a result of its activities the large vital forces of this country which depend for their effectiveness upon a progressive efficient patent system will be considerably the gainer.

#### IN GENERAL.

The year 1919 was the busiest in the history of the Patent Office. The cessation of the war turned the activities of producers from war to peace production, and this movement was soon reflected in the receipts of the Office, which increased by leaps and bounds, with an acceleration which grew greater as the months passed by. There was an increase of thirty-five per cent. in the total of applications for patents and designs received over the preceding year, and during the last six months the increase was more than fifty per cent. over the corresponding period of 1918. The general amount of correspondence increased twenty-five per cent. for the year, deeds received for recording in the Assignment Division increased fifty-one per cent., the number of words ordered in manuscript copies increased over fifty per cent., and the number of printed copies sold increased twenty-eight per cent., while the orders for same increased over thirty-five per cent. The increase in receipts in applications for registration of trade-marks was particularly heavy, amounting to seventy-eight per cent. for the year and substantially over one hundred per cent. for the latter half of the year.

The number of patents granted was the smallest since 1913, and this department of the Office was the only one whose activities of the year were below normal. It takes from fifteen to twenty-four months before increased receipts in the other divisions of the Office are reflected in the change of number of patents granted, and, judging from the past, the latter half of the year 1920 will show unusual increments of patents granted.

The cash receipts for the year increased 22 per cent., and a deficit of \$73,419.35 for 1918 was converted into a surplus of \$106,651.75 for 1919. If the item "Increase of compensation" be ignored and the comparison in balances placed upon a common basis for the two years the net balance showed a favorable increase of \$333,133.82.

The intimate connection between industrial progress and the business of the Patent Office is shown by these figures; but the interdependency of industrial security and efficient performance of the functions of this Bureau can only be realized by a study of that relationship and by a knowledge of the economic history of the country. It is no exaggeration to declare that the work of the civilized world is done mainly by instrumentalities which have resulted from the exercise of invention, that the energy generated by engines and devices invented since the first rumblings of the American Revolution have multiplied the power of mankind a thousandfold, and that if dependence were placed solely upon man's muscular efforts the world in its pres-

ent state could not exist. In the production of food, to give one instance, the reaper and thresher alone have done immeasurably more to increase the supply of man's basic need than all the agencies of educational propaganda and institutional assistance together. It would be presumptuous to try to reckon the increased growth in property values due to the steam-engine, the steamship, and the railroad. It would stagger the imagination to figure the added prosperity given to the world by the Bessemer process alone. In the two departments of electricity and chemistry inventions in the last forty years have provided an increment of wealth, productivity, and comfort beyond computation. The World War in its four years of destruction expended a greater amount of energy and required for its conduct more material of manufacture than was probably liberated by mankind or fashioned by all the world's peoples from the dawn of history to the invention of the steam-engine. Such efforts and such expenditures of material could only come from the processes and products of invention. It illustrates and most emphatically emphasizes the fact that invention is the special phenomenon of our present time.

It is as essential to our progress as is an established government to our security, and in the race between nations that country which provides the most enlightened patent system and which fosters most the inventive spirit is bound to win, for a little contemplation given to the subject will readily convince one that no method of personal improvement, no efficiency system, no particular political reorganization is comparably potent to the results of a great invention in increasing production—the wherewithal of industry, commerce, and welfare. No matter how the individual efficiency of the human element is increased—say fifty per cent., one hundred per cent., or conceivably two hundred per cent.—there cannot be competition with the results of invention, where a machine tended by a few men may perform the labor of hundreds or whereby a process may perform miracles unattainable through any other agencies.

With all our remarkable advances in knowledge we are but at the beginning of things. There is no estimable limit to the extent of our acquirements, for we cannot begin to conceive of the actual nature of our world, of the fundamentals of our existence. There is so much to learn that no matter how far we go we have yet to traverse illimitable distances on the road to the infinite stores of complete knowledge. As our utilization of the secrets of nature is directly dependent upon how much of them we have discovered, so every advance in scientific knowledge opens up a vista of new utilizations. As invention is the channel through which science finds utilitarian expression, it is clear there are no ascertainable limitations to the advance of invention, to the benefits that may accrue to mankind through its exercise.

Respectfully submitted,

J. T. NEWTON,  
Commissioner of Patents.
